

NextGen Job Tracker

A practical guide to reviewing your pipeline, adding opportunities, moving applications through each stage, and keeping your local data backed up.

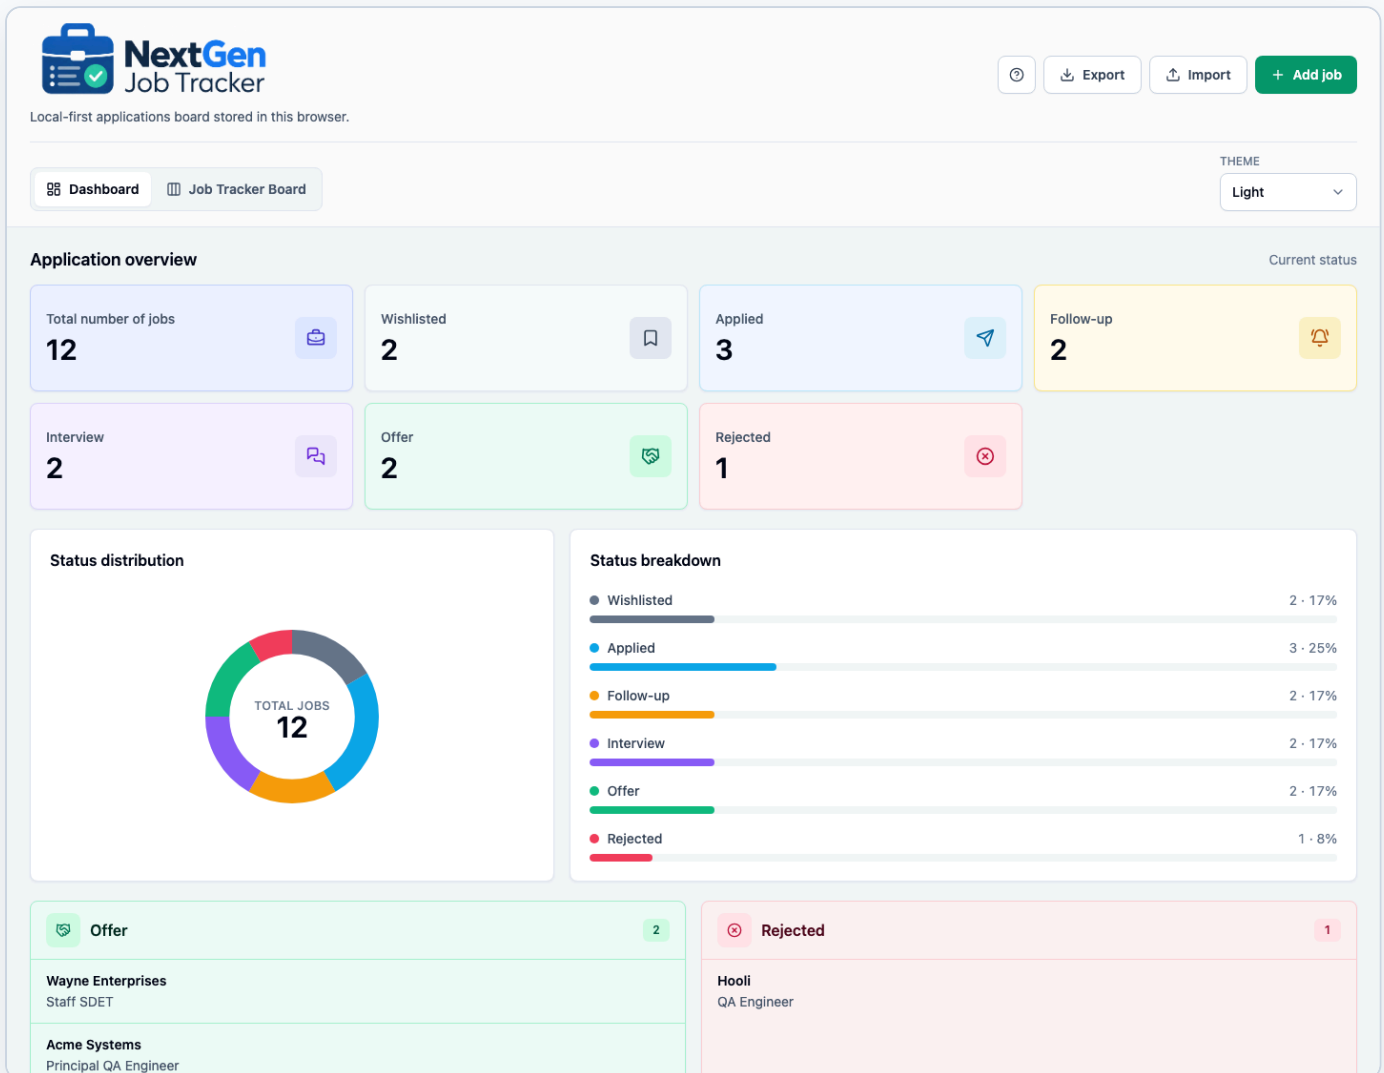

What you can do

- See your full application pipeline at a glance.
- Track each job from Wishlist through Offer or Rejected.
- Search, sort, edit, move, and safely delete job records.
- Export a JSON backup and restore it when needed.

- 1 Add a job
- 2 Update its status
- 3 Review your results

Understand your pipeline quickly

The Dashboard opens first and always reflects your current saved jobs.

1

Metric cards

Read the total pipeline and each status count without opening the board.

2

Status distribution

The donut and bars show how your applications are distributed.

3

Offers

Successful outcomes are grouped in green with company and role.

4

Rejected

Closed opportunities stay visible in red for an honest pipeline view.

Move every application forward

Select the Job Tracker Board tab to manage individual applications.

Local-first applications board stored in this browser.

Change a status

Drag a card to another column, or use the status menu inside the card. The menu is the easiest choice on a touch device.

Organize the board

Use Manual ordering for drag-based order, or choose Newest or Oldest to sort by applied date.

OPEN

Select the source icon to revisit the original job listing.

EDIT

Use the pencil button to update job details at any time.

DELETE

Use the trash button and confirm before the job is removed.

Capture the details that matter

Only company and role are required. Everything else can be added now or later.

1. Start with the essentials

Enter company, role, and current status.

2. Add the source link

Paste a valid job URL for easy return access.

3. Record useful context

Add resume, date, salary, and plain-text notes.

4. Save confidently

Required fields, dates, links, and duplicates are checked.

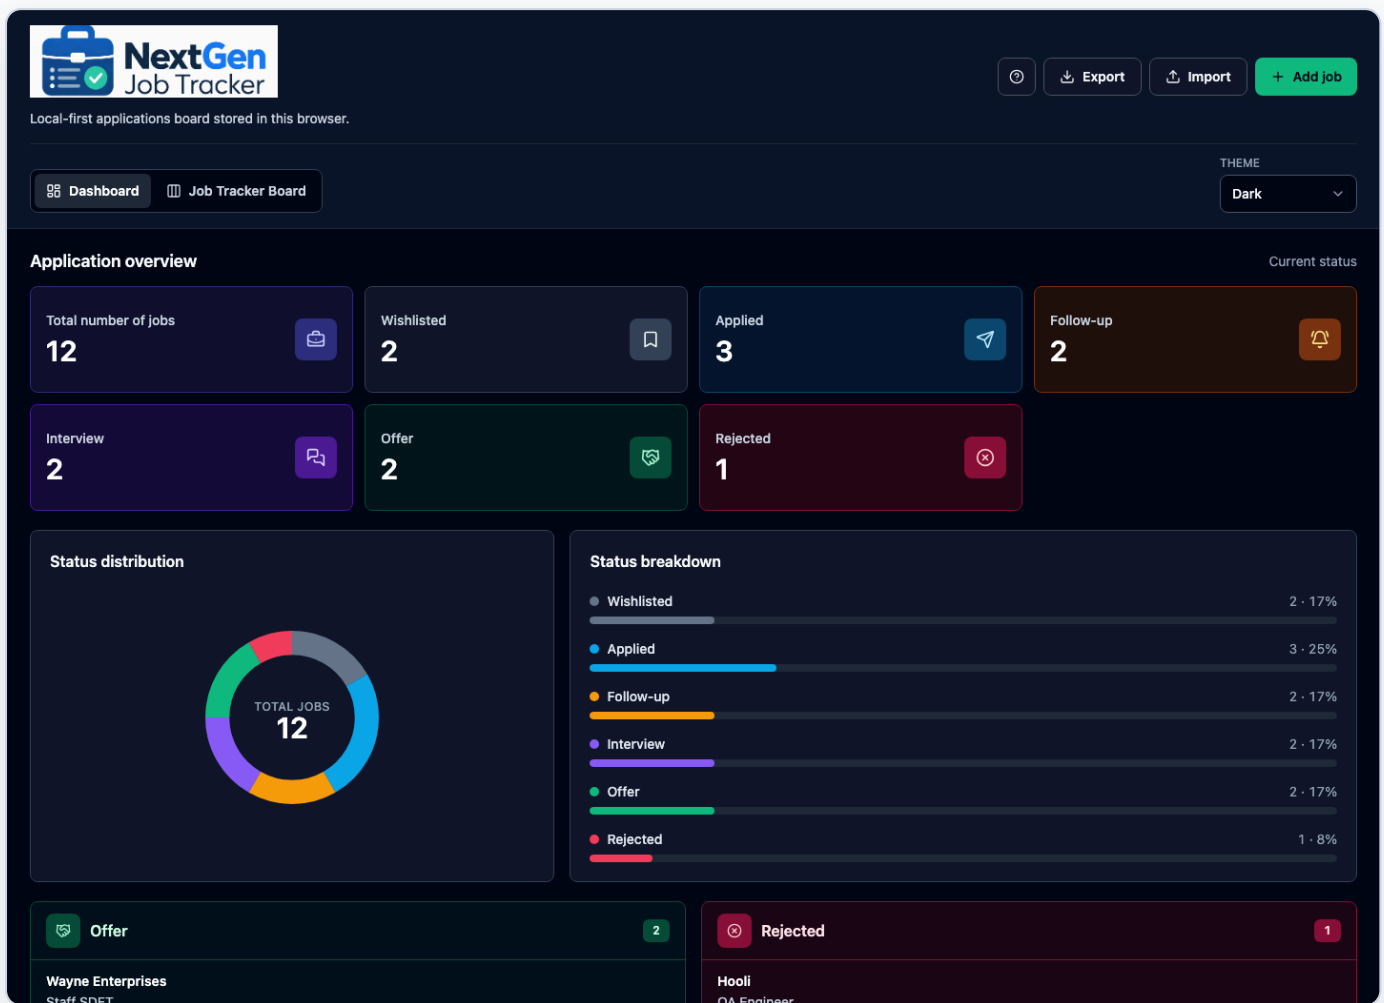

Applied dates

Moving a Wishlist job forward can add today's date.

Find a job: type any part of the company or role in Search. Clear Search to restore the full board.

Your tracker stays local

Choose Light, Dark, or System theme without changing your job data.

Stored in this browser

Jobs and settings live in IndexedDB for the current browser profile and app address.

Export regularly

Select Export to download a dated JSON backup containing jobs and settings.

Restore carefully

Import can Merge new records or Replace everything after explicit confirmation.

Data remains available when

- You reload or reopen the same app address.
- You use the same browser and browser profile.
- Browser or site data has not been cleared.

Data does not move automatically when

- You switch browser, profile, device, or private session.
- You move between localhost and the Vercel address.
- You clear browser or site storage.

Recommended habit: export a backup after important updates and before clearing browser data. Use the Help button in the header whenever you need the in-app reminder.
